

TAWG Session 3 Task 7 Instructions

The focus of this panel session is to elicit your expertise about the learning sequences that would lead to mastery in the NIST domains that fall within your TAWG's functional area focus. Your responses will provide the necessary input to calculate the threshold learning objectives. Passage across learning thresholds identify key milestones along the mastery learning path. There are two tasks to perform to develop a valid analysis of the learning thresholds: sequencing of learning responsibilities within a responsibility area (see adjoining task) and the sequencing of learning objectives within a responsibility (this task).

TASK INSTRUCTIONS

In this task, you will be asked to review a list of learning objectives that the panel previously determined were related to a cybersecurity responsibility relevant for your TAWG's functional domains. The resulting list should reflect the progressive mastery of the capabilities needed to perform the tasks necessary to fulfill the listed responsibility. To perform this task:

1. Please first review the list of learning objectives.
2. Drag and drop each learning objective box on the left into the blank space on the right in the order of which the learning objectives should be mastered. The learning objective you are dragging will not automatically go to the bottom of the list unless you place it there.
3. Re-order the list on the right, as needed, by dragging the learning objective boxes up or down.
4. Once you have the list in the proper order, click Next.
